

Wednesday Reading Assessment: Unit 0, Voltage

Prof. Jordan C. Hanson

January 31, 2024

1 Memory Bank

- $PE = qV$... Relationship between potential energy, charge, and voltage.
- $PE = mgh$... Gravitational potential energy.
- $KE = \frac{1}{2}mv^2$... Definition of kinetic energy.

2 Electric Potential and Potential Energy

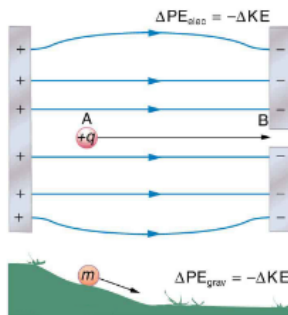

Figure 1: The relationship between potential energy and voltage.

1. Consider Fig. 1. Suppose the mass m rolls down a hill from a height of 30 meters. In the absence of *friction*, what will be the final speed of the object?
2. Consider Fig. 1. Suppose the charge is $q = 1\mu\text{C}$, and the voltage is 12 V. (a) What is the potential energy before the charge is released? (b) If the charge has a mass of 10^{-6} kg, what will the final speed be after the charge is released?
3. What voltage would be required to *stop* the charge from moving?
 - A: 6 V
 - B: 10 V
 - C: 12 V
 - D: -12 V
